DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Ying (US Patent 6,353,443).

Ying discloses, in figure 3, an inverted-F antenna comprising a substrate 320, a printed spiral or vortical structure 315 formed on the upper surface of the substrate, a ground metal formed on the lower surface of the substrate, not shown in number, where the ground post or short circuit leg 335 is electrically connected, and a feed leg 325. The patent to Ying also teaches that the length of the spiral structure is $\frac{1}{4}$ wavelength of the frequency band, column 4, lines 45-48. The increasing the encircling number of the vortical or spiral structure to make the wavelength of the frequency signal longer and thus reduce a resonance frequency band is inherent.

Allowable Subject Matter

3. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 8-13 are allowed.

Art Unit: 2821

5. Claims 2 and 8 recite a terminal micro strip which is fabricated on the lower surface of the substrate and electrically connected to the open circuit end of the vortical structure through a conductive aperture. The patents to Ying does not teach this terminal micro strip.

6. The patents to Ollikainen et al, Hirabayashi, Niu et al, Glenn et al, and Chen et al are cited as of interest showing the antenna similar to that disclosed.
